**Please direct questions or comments to the Division of Surveillance and Investigation,
Enhanced Surveillance Team: syndromic@vdh.virginia.gov**

Background

The Virginia Department of Health (VDH) currently receives data on visits to 77[§] acute care hospital emergency departments (EDs) and 13 free-standing EDs in Virginia for purposes of public health surveillance. The purpose of this report is to characterize ED visit trends for acute unintentional overdose by opioids and heroin among Virginia residents.

Chief complaints and discharge diagnoses of ED visits are analyzed by VDH to identify and monitor issues of public health concern across Virginia. The chief complaint is a free-text field that captures the patient’s primary reason for seeking medical care as interpreted by the ED registration staff. The discharge diagnosis is a coded field that uses standardized values outlined by the International Classification of Diseases (ICD) 9th and 10th Revision code sets.

Methodology

ED visits that are identified as **unintentional overdose by opioid or unspecified substance** include those with medical and non-medical use of a prescription opioid or where the substance is not specified, given evidence that the majority of fatal overdoses are opioid-related.⁴ These visits must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *overdose, OD, sobredosis, opioid, opiate, opium, narcotic, Narcan, naloxone, E850.1, E850.2, 965.00, 965.02, 965.09, 977.9, T40.0X1, T40.0X4, T40.2X1, T40.2X4, T40.3X1, T40.3X4, T40.4X1, T40.4X4, T40.601, T40.604, T40.691, T40.694, T50.901, T50.904*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, heron, 965.01, T40.1X, suicide, alcohol overdose alone, withdrawal, detoxification, rehab, addiction, dependency, mental health or psychological evaluation, allergies, constipation, chronic pain, refill requests, and any specified non-opioid drug or medication*

ED visits that are identified as **unintentional overdose by heroin** must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, 965.01, E850.0, T40.1X1A, T40.1X4A*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *suicide, withdrawal, detoxification, rehab, and addiction*

These criteria were revised in September 2016 and again in August 2017 in order to improve specificity in the identification of ED visits for unintentional drug overdose. Readers are strongly encouraged to review [syndromic surveillance data limitations](#) when interpreting this report.

ED visits for unintentional overdose by opioid or unspecified substance and heroin are presented by count or rate per 100,000 population. Rates are calculated using U.S. Census Bureau 2016 population estimates. To protect confidentiality and maintain accurate rate calculations, ED visit counts of 1 to 4 and rates with numerators of 1 to 4 are suppressed in this report. Counts of 0 are included.

The geographic location is assigned based on the patient’s residential zip code provided. A single zip code may span multiple city and county localities in Virginia. If a patient resides in such a zip code, the visit is assigned to the locality where the majority of the population resides. Places where the Virginia city and county populations have been combined to calculate a rate per 100,000 population due to zip codes spanning multiple localities can be found in [Appendix 1](#).

§ Between May and June 2017, fluctuations in reporting to VDH were observed. Before June, 82 acute care hospital EDs and 13 free-standing EDs submitted data. In June, one healthcare system in the Eastern Health Planning Region became unable to provide data. As a result, 77 out of an expected 82 acute care hospital EDs and 13 free-standing EDs reported data since June; any observed decreases in the count or rate of overdoses in the Eastern Region might be artificially low because of this change in reporting. Additionally, one acute care hospital ED in the Northwest Health Planning Region improved its data quality during June so that visits can be attributed to overdoses more accurately, thereby increasing the counts for that area. Please consider these changes in reporting when interpreting the contents of this report.

Highlights for September 2017

Statewide ED visits for overdose by opioid or unspecified substance among Virginia residents decreased by 5.6% from August (716 visits) to September 2017 (676 visits). The total Year-to-Date count of ED visits is 0.9% higher in 2017 as compared to 2016 (Figure 1B).

- Among the 5 [VDH health planning regions](#), rates of visits for overdose by opioid or unspecified substance have remained the highest in the Central (10.8 per 100,000 population) and Southwest (10.4 per 100,000) regions. The lowest rate has been observed in the Northern region for the past 12 months (Figure 1C). The Year-to-Date counts for the Central, Southwest and Northwest regions are higher in 2017 as compared to 2015 and 2016 (Figure 1D).
- By sex, there has been no significant difference in the proportion of visits for overdose by opioid or unspecified substance between females and males in the past 12 months (Figure 1E).
- By age group, the rate of visits for overdose by opioid or unspecified substance was the highest in the 25-34 year age group in September (14.1 per 100,000), and has been the highest in this age group since March 2017 (Figure 1F).

Statewide ED visits for overdose by heroin among Virginia residents decreased by 20% from August (127 visits) to September 2017 (101 visits). The total Year-to-Date count of ED visits is 16% higher in 2017 as compared to 2016 (Figure 2B).

- Among the 5 [VDH health planning regions](#), rates of visits for overdose by heroin were the lowest in the Northern region in September (0.3 per 100,000), which has been below the state average for the past 12 months (Figure 2C). The rate was the highest in the Northwest region (2.2 per 100,000). The Year-to-Date counts are higher in 2017 as compared to 2016 and 2015 for all regions except the Eastern region. (Figure 2D).
- By sex, males contributed significantly (p -value $<.05$) more visits for overdose by heroin as compared to females in September 2017 and in every month shown in Figure 2E.
- By age group, the rate of visits for overdose by heroin was the highest in the 25-34 year age group (3.7 per 100,000) in September 2017, and has been higher than any other age groups for the past 12 months. The rates for the other age groups have decreased or remained the same in the last three months (Figure 2F).

Appendix 1

Virginia Localities that were Combined for the Purposes of Calculating Rate per 100,000 Population

- Alleghany County and Covington City
- Albemarle County and Charlottesville City
- Augusta County, Staunton City, and Waynesboro City
- Chesterfield County and Colonial Heights City
- Frederick County and Winchester City
- Fairfax County, Fairfax City, and Falls Church City
- Grayson County and Galax City
- Greensville County and Emporia City
- Henry County and Martinsville City
- Montgomery County and Radford City
- Pittsylvania County and Danville City
- Prince George County, Hopewell City, and Petersburg City
- Prince William County, Manassas City, and Manassas Park City
- Roanoke County, Roanoke City, and Salem City
- Rockingham County and Harrisonburg City
- Rockbridge County, Buena Vista City, and Lexington City
- Southampton County and Franklin City
- Washington County and Bristol City
- Wise County and Norton City
